

Problem

As a University student, we are waiting to search a good job in a company when u finishing our university academic, but how fare we all search about the good companies for a good job! Its so low in rete, because there are no any platform to know about companies and their vacancies.

When a company looking for a good employer form a university, how does the company searching them among lots of university students, Just the companies advertising in medias and waiting for applicants to arrange an interview from them.

How many university students have making or worrying about their CV or Portfolio while they are doing academic in the university? This is also still low in rate because they don't know how to make a proper cv or portfolio to their willing job title.

Solution

So, we identified 3 problem when is running in the present situation, for this we are proving Single solution by using a modern technology called CLOUD COMPUTING.

We are suggesting a cloud based platform to this situation, its work like this.

The main users are only the students who are registered in a university for a Degree or Who have completed a degree from a Srilankan University, Other than a university student no one can sign up as a student, for this validation we are requiring their university ID when they are signing up to conform their accounts. When they are signing up the will add come job category which they are interested to apply or interested to continue their career, then every user will get some Virtual CV formats per their job title selection which they mentioned while signing up. They students will minting a Virtual CV in the platform.

In the other site the Company HR will be signing up as maintaining a separate account for their situation. And the company HR also need to add the job category which type of applicants that they are looking form. After this process HR can sort applicants according to their job category, more than HR's selection category they can see other type of applicants CV's. Then they can call them for interview.

Why Cloud Computing?

Cloud computing is proving the more efficiency to the availability of a platform or an application, and many users can use this platform form various globalism area and various user type include system admin. And there is a Virtual CV format is running in every student's profile with auto cv and profile rating algorithm.

Globalism

Srilankan University students will be the End user of the application, Private and Government Universities will be considered into this category. Local and international Companies will be allowing to sign up as Company profile. System admins are from Sri Lanka. So this cloud platform gone handle various global request form various kind of peoples.
